Hand Sanitizer
and wound care

Works in seconds.
Protects Longer.

Discover hand and first aid sanitizers that keep killing germs even after dry.

✓ Alcohol-Free ✓ Triclosan-Free ✓ Fragrance-Free

Eliminates 99% of Germs

Leading Alcohol-Base Hand Sanitizer

- ✓ Kills 99.99% Bacteria ✓
- ✗ Sustains for 3+ Hours ✓
- ✗ Fragrance-Free ✓
- ✗ Doesn't Dry Skin ✓
- ✗ Non-Flammable ✓
- ✗ Safe for Babies ✓

Alcohol-based hand sanitizers require reapplication with each exposure to germs and can over dry the skin, trapping germs in dead skin cells. This occurs because alcohol strips away the oils in your skin that retain moisture. BAC-D alcohol-free sanitizers provide extended protection against germs and are gentle enough to use on cuts, scrapes and lacerations.

Extended Protection

Alcohol-based hand sanitizers offer zero protection against germs and bacteria once the product has dried on your hands. BAC-D Hand Sanitizers continue to reduce contamination for an extended period after application.

Non-Irritating

Alcohol-based hand sanitizers require reapplication with each exposure to germs and can over dry the skin and strip away the natural oils in your hands that help retain moisture. This drying can lead to cracking and even dermatitis.

Safe For Children

The active ingredient, BZK (Benzalkonium Chloride), is an FDA Monograph drug and has been widely used in the health care industry for more than 60 years in "leave-on" anti-bacterial skin care products. It is safe for children, making it ideal for schools, day cares and anywhere you want to kill germs!
